Relevant Experience

Senior Android Engineer, Veroke Mar 2024 — Present

- Architected and delivered scalable, high-performance Android solutions for a healthcare platform using Kotlin, MVVM, and Clean Architecture
- Applied SOLID design principles to build secure, maintainable, and efficient mobile modules handling thousands of active users
- Implemented CI/CD pipelines via GitHub Actions and Firebase for automated build, deployment, and release processes
- Led performance testing and optimization, reducing load times and improving responsiveness across multiple devices
- Provided technical mentorship through code reviews, architecture discussions, and full SDLC participation from design to release

Android Engineer, HyperNym July 2022 — May 2024

- Designed and developed scalable Android applications using Kotlin, MVVM, and Clean Architecture, ensuring high performance and maintainability
- Engineered and optimized core app modules for real-time data synchronization, offline caching, and large-scale user handling
- Conducted high-performance testing and optimization, improving app responsiveness, stability, and crash-free performance
- Collaborated with DevOps to establish CI/CD pipelines, contributing to efficient deployment, release cycles, and full SDLC delivery

Android Engineer, Infini8ai Jun 2021 — July 2022

- Developed and enhanced health and wellness Android applications for the Optimus Health platform, using Kotlin and modern mobile software development practices
- Integrated Google Fit and Huawei Health Kit SDKs to deliver real-time activity tracking, personalized insights, and seamless health data synchronization
- Applied MVVM and Clean Architecture principles to ensure code scalability, modularity, and long-term maintainability
- Collaborated across teams to translate user and business requirements into intuitive, high-performance mobile interfaces following full SDLC standards

Android Engineer, UpTechSol Aug 2020 — Jun 2021

- Contributed to mobile software development across multiple client projects, focusing on Kotlin and Android Jetpack for modern, scalable app design
- Implemented new features and UI components that improved functionality, usability, and overall user experience
- Supported code reviews, bug fixing, and QA testing as part of the full SDLC, ensuring high-quality, maintainable codebases
- Collaborated closely with cross-functional teams, including designers and backend developers, to deliver seamless, high-performing Android solutions

Skills

Programming Languages

Java, Kotlin, Python, HTML, CSS, JavaScript

Libraries & Frameworks

Android Jetpack, Retrofit, Dagger/Hilt, Coroutines, Firebase, Glide, Material Design, MVVM

Tools & Platforms

Android Studio, Firebase Console, Git, GitHub, Gradle, Django, Netlify, Heroku, Jira, Postman, Play Console, Docker, Firebase, Figma

Selected Projects

Tabib Application — Play Store

Developed a healthcare app offering deals in skincare, dental, laser, and fitness, featuring appointment booking, loyalty points, and Qitaf rewards

Vodafone Fleet Dispatcher — Play Store

Developed an enterprise IoT fleet management app enabling real-time tracking, route optimization, and asset monitoring for dispatch teams

Vodafone Cold Chain — Play Store

Built an IoT app for real-time cold storage monitoring with MQTT and Firebase-based alerting

Education

Szabist University - 2020

Bachelor of Science in Computer Science

Interests

Traveling, stargazing, hiking, mobile technology, photography, mindfulness, and exploring new cultures
